Weekday Assignment for Growth Intern (Shivam Asthana)

First I gave the concise and errorless prompt to the AI Generative tools for filtering and transforming the data for our use as per required information provided to me.

- I paste the exact sheet over there & it has done its own part & provided me the required data based on the "Job role" and "Employee size'' which is less than 200.

But since it is also a technology, can have some analytical error, could be based on non-understanding of proper prompt delivered by me.

- So I wanted to check it once more by applying the filtering on both the parameters, manually and I did it too.
- And best thing was the result was exact same.
- 81 Jobs are there.
- I did it by moving to the Zoho sheet and start filtering both "Job Role" & "Employee Size"
